Note-Alternative use of an acceptor site. No experimental
Confirmation available;
TISSUE SPECIFICITY: Detected in monocytes, macrophages, dendritic
Cells, lung, natural killer cells and B-cells.
INDUCTION: Upon contact with CD8(+)CD28(-) alloantigen-specific T
BUDDAIN: Contains 3 copies of a cytoplasmic motif that is referred
Co as the immunoreceptor tyrosine-based inhibitor motif (TIMM).
This motif is involved in modulation of cellular responses. The
phosphorylated ITIM motif can bind the SH2 domain of several SH2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Leukocyte immunoglobulin-like receptor
subfamily B member 4.
Extracellular (Potential).
                   SUBCELLULAR LOCATION: Type I membrane protein. Ligand binding leads to internalization and translocation to an antigen-
                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytoplasmic (Potential).

"Human natural killer cell receptors: insights into their molecular
function and structure.";
J. Cell. Mol. Med. 7:376-387(2003).
-!- FUNCTION: Cytotoxxicity activating receptor that may contribute to
the increased efficiency of activated natural killer (NK) cells to
mediate tumor cell lysis.
-!- SUBGUIT: Interacts with CD3Z and FCERIG.
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PubMed=12960161; DOI=10.1074/jbc.M308491200;

/FIId=VSP 010406.
Missing (in isoform 3 and isoform 4)
         Note=No experimental confirmation available, TISSUE SPECIFICITY: Selectively expressed by both resting and activated NK cells.
                                                    SIMILARITY: Belongs to the natural cytotoxicity receptor (NCR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (Potential).

Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-!- FUNCTION: Cytotoxicity activating receptor that may contribute to the increased efficiency of activated natural killer (NK) cells to mediate tumor cell lysis (By similarity).

-!- SUBUNIT: Interacts with CD3Z and PCERIG (By similarity).

-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).

-!- TISSUE SPECIFICITY: Selectively expressed by NK cells.

-!- SIMILARITY: Belongs to the natural cytotoxicity receptor (NCR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Natural cytotoxicity triggering receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytoplasmic (Potential).

Proc. Natl. Acad. Sci. U.S.A. 100:1174-1179(2003).

-!- FUNCTION: May act as receptor for class I MHC antigens. Ligand binding leads to the activation of eosinophils and to the release of RNASE2. IL4 and leukotriene C4.

-!- GREELLULAR LOCATION: Type I membrane protein.
-!- SUBCELLULAR LOCATION: Detected on eosinophils, neutrophils and
